

Rotary Seniors for the Month of April

By Sam Kiernan

The seniors chosen as the Rotary Seniors of the Month were Olivia Rodriguez and Eric Kellermann. Throughout their high school careers, they showed outstanding hard work and dedication towards their academics, sports, extracurriculars and so much more. The Rotary Club recognized their efforts in this month's meeting.

The first rotary senior of this month is Olivia Rodriguez. Olivia is the student Council Historian, and she was a Section Leader for the Flutes in the Marching Band. Olivia is a part of the National English Honors Society, Tri-M Honors Society, Future Business Leaders of America, Academic Team, Band (Symphonic and Concert) and Stage Crew. Through the many activities she has taken part in, Olivia has developed a strong love for helping people through volunteering. She has been able to help the community through NEHS, which targets its community service towards improving English education. Within band, she was able to

strengthen her connection within her high school community and strengthen her music abilities which she will continue doing in college. Olivia was able to have a direct impact on her school by helping with school events such as homecoming and the holiday festival through her position in Student Council. Future Business Leaders of America helped Olivia with her future major and widened her understanding of bioengineering. Olivia will be attending Pitt to pursue a degree in bioengineering. Olivia's interest in engineering started in middle school where she had a robotics class and decided she wanted to become an engineer. Then, her freshman year she took biology and decided that bioengineering was what she wanted to do.

The second rotary senior of this month is Eric Kellermann. Eric is a team captain for both the boys Track and Cross Country teams and also swims for Oxford and Jennersville. He is also a part of National Honors Society, National English Honors Society and Future Business Leaders of America. Through the National Honors Society's, he has even been able to volunteer and help with the community by assisting with blood drives and writers' workshops. Future Business Leaders of America allowed him to learn more about a subject, Public Policy and Advocacy, that he had learned within his AP Government class. Eric has also been a part of Boy Scouts for 12 years and has been able to receive many opportunities, one of which was to help design and build a pavilion for the Glenroy Preserve. For this pavilion, Eric used mechanical drawing skills that he received from a class. This interest in designing and building the pavilion led to his interest in engineering. His interest in engineering was encouraged by the classes that he took in high school and his interest in the Air Force started at a young age. For his future, Eric has decided to enroll in the US Air Force for Aeronautical Engineering.
